## About this book

State of the art in sustainability thinking, inspired by interdisciplinary ideas of ecological economics. This book is focusing on sustainability pathways, new economic theory, democracy and institutions, multidimensional assessment of sustainability, macroeconomic modelling and policies, climate change and renewable energy, resource flows and circular economy, regenerative cities, environmental conflicts and values. It will be helpful for MSc and PhD students in Economics, Management, Environmental Change, Ecological Economics, Development Economics, Sustainability and practitioners in business, international and nongovernmental organizations. Rich, diverse and thought provoking collection of top level contributions, it will help to facilitate the transition towards sustainability and educational reform.

*A fabulous composition of papers by the authors who really count! Ernst von Weizsäcker, The Club of Rome*

The authors present a refreshing perspective on the possibilities of human progress in harmony with nature, without the need for economic growth to secure long term human welfare and wise use of nature's services. Extremely relevant. *Peter May, Past President, International Society for Ecological Economics and Professor, UFRRJ, Rio de Janeiro, Brazil*
